

# NEWSLETTER No 2 – The training e-courses

## The training course on RISK MANAGEMENT – ISO 31 000

The training course on risk management is based on ISO series of standards **ISO 31000** and provides the trainees with theoretical and practical knowledge on how to develop and implement a risk management system.

**Risk management** is a challenge for any company, and its importance is increasing nowadays, when risks to businesses exist everywhere. The training course provides directions on how risk-based decision making could be introduced into all aspects of the organization's life.

**The training course consists of three modules.**

### Module 1

The first module provides general knowledge on standards and standardization, benefits of standards for consumers, organizations and society, development of standards and their impact on the competitiveness of businesses and European economy.

### Module 2

The second module provides basic knowledge on risk management and the ISO standards dealing with it. It explains the risk management basic definitions, principles, framework, and processes.

### Module 3

The third module is more comprehensive and offers professional knowledge on the practical aspects of risk management implementation in an organization. The basic statements of module 2 are explained in details and some practical examples are provided.

The total curriculum of the training course is organized in 30 school classes. Tests for checking the knowledge gained by the trainees' are included.

## The training course on INFORMATION SECURITY – ISO 27 000

The training course on information security is based on series of standards **ISO/IEC27000** and provides necessary background knowledge and useful tips on handling information security.

**Information plays** a significant role; digital information and communication technologies have already become an integral part of our daily life and businesses. Besides, the risk of data loss becomes increasingly apparent. The one thing is clear – data should be protected and there should be a minimum security level ensured.

The training course brings you to the world of an Information Security Management System (ISMS) and best practices in information security management provided by the series of standards ISO/IEC 27000.

**The training course consists of three modules.**

### Module 1

The first module provides general knowledge on standards and standardization, benefits of standards for consumers, organizations and society, development of standards and their impact on the competitiveness of businesses and European economy.

### Module 2

The second module provides information on the role of standards in everyone's daily life and the benefits that one can reap from their usage including practical examples.

### Module 3

The third module is more comprehensive and offers professional knowledge on the practical aspects of ISMS implementation in an organization manifesting its ability to apply consistent and recognizable information security principles.

The total curriculum of the training course is organized in 24 lessons. Tests for checking the knowledge are included.
